

H-60A/L – BLACK HAWK / SEAHAWK STAB / SAS STABILATOR / STABILIZATION AUGMENTATION SYSTEM

ARMY PN 05-0330-07 ► NAVY PN 02-1103-01

ON-AIRCRAFT TESTING

- An UxValidator Family Solution
- Reduces Maintenance and Improves Aircraft System Reliability
- Graphical View of the Stabilator Actuator Feedback Voltage
- Real-time Diagnostics
- “Wiggle” Mode Intermittent Fault Locator
- Compatible with all Army, Navy and Air Force Legacy H-60 Aircraft
- Direct Replacement for TS-3920B
- Trusted UxValidator™ Platform
- Includes UxValidator Series I
- CECOM and Navy Approved
- Navy / Coast Guard: NSN 4920-01-526-5799
Army / Air Force: NSN 6625-01-529-3346

The Stabilator System and SAS Amp

The H-60 Stabilator/SAS Test Set synthesizes Stabilator/SAS measurement data to locate “hard to find” problems by monitoring sensors, transducers and actuators.

The H-60 Stabilator/SAS Test Set stabilator test displays the stabilator actuator position graphically on the UxValidator screen to easily view the feedback from the system. Both No.1 and No.2 signal paths are displayed simultaneously providing maintainers with complete system interoperability.

UxValidator™ Technology . . .

The UxValidator family of test solutions delivers versatility, ease-of-use and reliability never before available in portable, application-specific troubleshooting equipment.

The UxValidator requires no external gauges or meters, all that is needed is the UxValidator, BrainPak™ and interface cable. Power is received from the aircraft harness when adjusting on the aircraft and from the included 24VDC power adapter when working on the bench.
